VOLTIX STOREFRONT

REACT FRONTEND WEB DEVELOPMENT PROJECT

VOLTIX

Executive Project Overview

VOLTIX is a sleek, modern e-commerce web platform engineered for PC enthusiasts and custom builders. Featuring high-contrast dark aesthetics with electric lime accents, the application delivers a seamless component shopping experience. Built by a 5-member team of React frontend web developers, the platform combines modular HTML/React structure, custom CSS styling, dynamic client-side filtering, and full multi-device responsiveness.

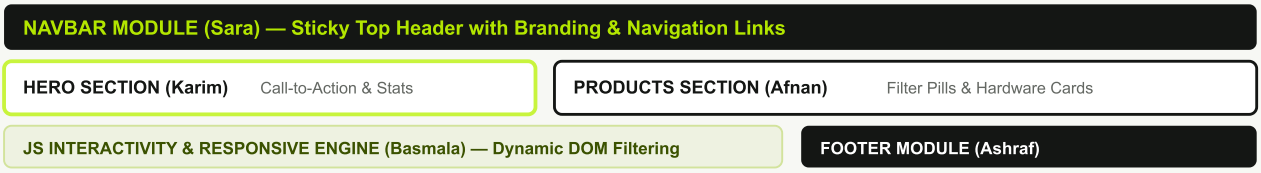

Team Roster & Module Scope

5 DEVELOPERS

TEAM MEMBER	ASSIGNED MODULE / SCOPE	KEY DELIVERABLES
Karim Team Leader	Hero Section	Value proposition, CTAs, status badges
Sara	Navigation Bar	Sticky header, brand logo, navigation links
Afnan	Product Showcase & Cards	Hardware grid, product cards, spec badges
Ashraf	Footer Component	Link directory, brand mark, legal footer
Basmala	JS Logic & Responsiveness	Interactive filtering, media query adaptation

Application Component Architecture

SYSTEM FLOW

Karim — Team Leader

Hero Section

Karim designed and implemented the hero banner section, establishing the visual anchor and value proposition for the VOLTIX storefront.

- **Dark Gradient Aesthetics:** Created a high-impact background blending deep black overlays with hardware photography (`.hero-section`).
- **Typography Hierarchy:** Authored the bold headline `"Power your best build."` with electric lime color highlights.
- **Interactive CTAs:** Implemented primary call-to-action buttons (`.btn-lime`) with smooth hover translation effects on vector arrow icons.
- **Trust Metrics Bar:** Integrated a bottom statistics widget displaying 24H fast dispatch, 3YR warranty, and 100% genuine parts badges.

Sara

Navbar Section

Sara developed the primary navigation bar, ensuring consistent top-level navigation and brand positioning across all scrolling states.

- **Sticky Posture:** Engineered `position: sticky` header with top placement and layer priority (`z-index: 1000`).
- **Brand Identity:** Formatted bold `VOLTIX` logo typography with optimal font sizing and color contrasting.
- **Flexbox Layout:** Used spaced flex alignment (`justify-content: space-between`) with flexible gap spacing.
- **Navigation Links:** Built main section links (Home, About, Services, Contact) featuring lime hover color transitions and custom CTA button.

Afnan

Product Viewing & Cards

Afnan created the central hardware product catalog, structuring product display cards, filter categories, and spec metadata.

- **Responsive CSS Grid:** Implemented a 3-column product grid (`.product-grid`) using scaling for card dimensions.
- **Product Cards:** Styled cards showcasing DDR5 RAM, Cases, Motherboards, CPUs, GPUs, and Cooling Fans with pricing and specs.
- **Visual Micro-Interactions:** Added image zoom transitions (`transform: scale(1.035)`) on hover states.
- **Status Badges:** Integrated vibrant lime overlay badges (`BEST SELLER` , `NEW`) for immediate visual identification.

Component Integration Quality

The hero section, navigation header, and product showcase blend seamlessly into a cohesive visual language with zero styling conflicts between member deliverables.

Interactive Scripting, Responsiveness & Footer System

MODULE BREAKDOWN (2/2)

Ashraf

Footer Section

Ashraf constructed the dark-themed site footer, creating a strong visual anchor with complete navigation paths and brand information.

- **Geometric Brand Mark:** Built a custom CSS geometric logo with a 45-degree rotated crosshair mark (`.brand-mark`).
- **Multi-Column Link Directory:** Organized links into structured sub-grids (`Shop` , `Help` , `Follow`) using uppercase monospaced headers.
- **Sub-Footer Architecture:** Implemented bottom metadata grid displaying copyright info, privacy policy, terms, and site taglines.

Basmala

JS & Responsiveness

Basmala authored the core JavaScript logic (`main.js`) and responsive media engine, powering interactivity and seamless mobile support.

- **Client-Side Filtering Engine:** Built event delegation on `.filters` to filter cards based on `data-filter` categories.
- **Accessibility State Syncing:** Dynamically toggled active button classes and updated `aria-pressed` states for screen reader compatibility.
- **DOM Visibility Management:** Used native DOM property toggling (`card.hidden`) for zero-latency UI updates.
- **Multi-Tier Media Queries:** Authored responsive breakpoints at `900px` , `768px` , `600px` , and `560px` for mobile adaptation.

Project Technical Summary

PERFORMANCE & STACK

CATEGORY	IMPLEMENTATION STANDARD	KEY DETAILS
HTML Structure	Semantic HTML5 elements (`<nav>` , `<article>` , `<footer>`)	Clean SEO-ready DOM tree
CSS & Styling	Bootstrap 5 + Custom `style.css` stylesheet	Modular Flex & Grid systems
JavaScript	Vanilla ES6 JS (`main.js`) with event delegation	Lightweight & zero dependencies
Responsiveness	4 CSS breakpoints (`900px` to `560px`)	100% Mobile & Tablet ready

5	6	4	100%
REACT WEB DEVS	HARDWARE CATEGORIES	RESPONSIVE BREAKPOINTS	INTERACTIVE UI
